

## Battery Upgrade for the Bird Dog Plus

**Extended battery life is available with the new nickel-metal hydride smart charger for the 5000 or the lithium ion battery & smart charger for the 6000.**

For customers who want longer battery life for the Bird Dog Plus, here it is! Every 5000 or 6000 Bird Dog Plus came standard with a nickel-metal hydride (NiMH) battery and a standard wall charger. Now you can upgrade any older 5000 or 6000 Bird Dog Plus, gaining the following:

- 40% more capacity for a 5000 Bird Dog Plus with a NiMH smart charger
- 130% more capacity for a 6000 Bird Dog Plus with a LION battery and LION smart charger.
- **Trickle charge capability with both smart chargers—Cannot overcharge—Leave it plugged in for as long as you like**
- **Color codes on the chargers to show if the battery has no charge, is charging or has full charge**
- **Longer battery life with the smart chargers because the batteries are fully charged**
- **Charges directly from the front face of the Bird Dog Plus with an easy to attach connector—Impossible to attach the wrong charger to the Bird Dog Plus**
- **No battery memory issues with the discharge circuit in units shipped after January 1, 2008 or upgrades**
- **Bird Dog Plus units will have to be returned to Spinlab for upgrade (call Spinlab for pricing).**

**Spinlab Utility Instrumentation, Inc.**
