

Bird Dog Plus Sensor Upgrade

Upgrade Existing Sensors to Include
Suction Cup and OPTOCOM Port Sensors

Detecting pulses from an electronic meter has never been easier!

Spinlab's new and improved meter sensors are the ultimate in pulse detection technology. With the sensor upgrade you will be able to quickly and accurately detect pulses from electronic meters in a matter of a minute. Simply attach the new sensor to the meter and watch the LED flash with the pulses. The look and use of your existing laser and infrared sensors will stay the same. The new sensors will simply plug into the connector on your black sensor box. With the upgrade, you will get the following:

- **OPTOCOM port sensor that magnetically attaches to the OPTOCOM port to detect pulses**
- **Suction cup sensor to detect pulses that are not emitting from the OPTOCOM port**
- **Enhanced circuitry for the existing infrared sensor makes it less sensitive to sunlight and more sensitive to pulses**
- **Upgrade any existing Spinlab sensors to this new capability**

OPTOCOM Port Sensor

Suction Cup Sensor
